

Turning your waste into energy -

WT15 Heater Unit

The WT15 is the largest of the hand fired units and is still the most popular heater in the wood working industry since its launch.

The reason for its popularity is, as with the other WT heaters the robust design, low servicing costs and high heat output.

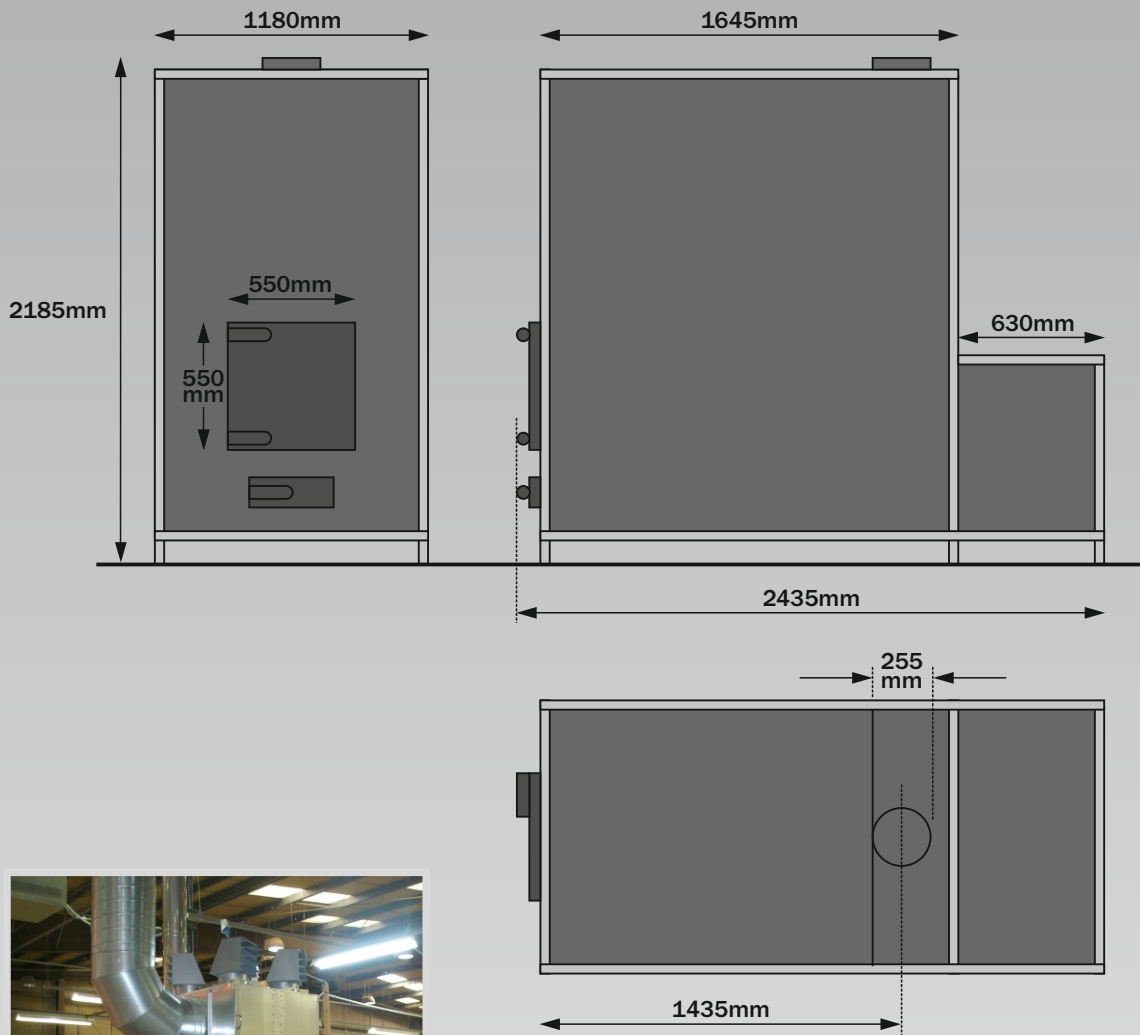

Fully compliant with all the latest emission regulations the WT15 really is the market leader, and with a payback period of around 12 months it's no wonder everyone questions there self as to why they never bought one years ago.

Burning anywhere between 1000 and 2000kg per week and producing a whopping 500,000 btu/hr the WT15 will cope with most companies waste problems. Whether it is MDF, chipboard, hardwood or softwood you can rest assured the WT15 will dispose of it cleanly and legally without a costly oil or gas afterburner.
